

Mac OS 9: IP File Sharing Delay

This document discusses possible delays that may occur when using file sharing over IP with Mac OS 9. This article has been archived and is no longer updated by Apple.

If you are experiencing one or more of the following problems while using file sharing over IP:

- long delays in waking your system when changing networks
- long delays on Startup or Shut Down
- long delays when starting or stopping file sharing

Use the Extensions Manager control panel to disable the SLPlugin extension.

For related information see technical document 106106 "[Mac OS 9.1: Services Location Protocol \(SLP\) Changes.](#)"
