ComTalk and NFS: Compatibility Update

Can I get an update on APT's ComTalk AppleTalk & TCP/IP Routing products and the new NFS software compatibility?

This article has been archived and is no longer updated by Apple.

```
NFS/Share from Intercon and Wollongong's NFS Client do not work across
ComTalk gateways because of lack of support for splitting up and
encapsulating larger UDP-type packets over AppleTalk/LocalTalk.  These
vendors are aware of this problem and are working on a fix.  There are no
problems supporting TCP-based services, such as Telnet, SMTP, FTP.

Other than this compatibility issue, these products are very fast, and
have a comprehensive set of security options.
```
